Subject Index to Volume 12 - 1990

Abrasive effect of electrical toothbrush, 4:13
Air-water syringes
  flushing procedures to reduce biofilms, 2:13
  consistent contamination in water lines, 2:13, 2:9
Anti-calculus dentifrices, 1:13
Anti-Hypertension medication, factor in root decay among geriatric patients, 3:30
Antimicrobial rinses
  comparison to mechanical devices, 3:8
  cetylpyridinium re plaque, gingivitis, 3:8

Bacterial biofilm
  contamination in air-water syringes, 2:13
  use of biocides 2:13
Bicarbonate-based powder and paste, effect on caries and *S. sobrinus*, 1:18
Black-pigmented Bacteroides
  adherence to restorative materials, 2:31
  role in periodontal disease, 2:31
Bleeding on probing
  with meswak, 4:19
  stopped by subgingival irrigation, 4:5
Bonding agents/composite resin
  adhesive advantage re acid-etchants, 3:30
  penetration to DEJ, 3:30
Book reviews
  Colby, Kerr and Robinson's Color Atlas of Oral Pathology, 3:29
  Color Atlas of Oral Diseases, 1:17
  Essential Pathology, 2:12
  Fundamentals of Dental Radiography, 1:24
  Trigeminal Neuralgia, 4:34

Cetylpyridinium chloride
  adsorption on ground and polished enamel, 1:25
  plaque inhibition, 1:25
CFUs, reduction in water lines, 2:9
Children's toothbrushes, effectiveness, 5:22
Chlorhexidine gluconate
  treatment of periodontal pockets, 4:5

Desensitizing toothpastes, effect on plaque, 4:28
Diatomaceous earth/strontium chloride, 4:28

Enamel
  preparation for bonding resin, 3:30
  demineralization by juices and colas, 5:5
Endo-α-1, 3 glucanase, in mouthrinse, 5:10

Fruits
  cariogenic potential, decreasing order, 1:30
  demineralization effects on enamel, 5:5
Fluroshield
  retentiveness of seal *in vivo*, 4:24

Geriatric patients
  salivary flow rates in treatment planning, 4:10
  Anti-hypertension medications as factor in decay, 3:26
  treatment with artificial saliva, 3:26
Gingivitis
  effects of cetylpyridinium 3:8
  effect of meswak, 4:19
  effect of Plax, 2:26
  reduction by floss and interdental cleaner, 3:8

High-speed handpieces
  infection control in lines, 2:9
  use in cavity wall preparation, 3:30

Infection control
  procedures, intraoral radiology, 2:4
  in handpiece water lines, 2:9
  in air-water syringes, 2:13
  role of auxiliaries, 2:4
  effect of autoclaved handpiece, 2:9
Interplak, Water Pik Automatic comparison, 3:5
Intraoral prosthetic appliance
  prevention of palatal grooving, 1:9
  fabrication and insertion procedure, 1;9
Intraoral radiology
  handling of film packets, 2:4
  infection control procedures, 2:4

Lashley cup, salivary flow rate measure, 4:10.
Lasing cavity walls, increased microleakage, 1:5
Latex gloves
  tactile discrimination, compared with vinyl, 2:21
  preferred for size, fit, comfort, 2:21

Marginal microleakage, effects of lasing, 1:5
Meswak
  interproximal dental health, 4:19
  Bacteroides inhibited, 4:19
  bleeding on probing, 4:19

Overhang removal, effect on flossing frequency, 1:22

Pepsi Cola, Diet Pepsi Cola, comparison to fruit juices as demineralizer, 5:5
Periapical lesions, inflamed
  possible vital response, 1:3
  innervation of pulp, 1:3
  need for local anesthesia, 1:3
Plaque control
  toothpastes used for hypersensitivity, 4:28
  Plax, no more effective than placebo, 2:26
  effects with electric toothbrushes, 3:5
  mechanical *versus* antimicrobial rinse, 3:8
  ADA and CDA guidelines for trials, 3:18
  effects of mutanase mouthwashes, 5:10
  relation to scrubbing method, 5:19
Prebrushing rinse Plax, effectiveness, 2:26
Periodontal treatment, non-surgical, 4:5
Pit and fissure sealant, evaluation of Fluroshield, 4:24
  Fluoride-releasing compared with non-fluoride sealant, 4:24

Restorations, glass ionomer cement anticariogenic properties, 1:5
Rota-dent Electrical Toothbrush, 4:13
Rotating electrical toothbrush
  without dentifrice, 4;13.
  comparison of mechanical actions, 3:5
  comparison with manual toothbrush, 3:5

Salivary flow rates, in treatment planning of geriatric, 4;10
Sanguinarine, inconsistency of reports as antiplaque and antigingivitis agent, 3:18
  salivary pH, 3:18
Scrubbing (brushing) technique evaluation, 5:19
Subgingival Irrigation, self-per-

Scrubbing (brushing) technique evaluation, 5:19
Subgingival Irrigation, self-per-

formed
periodontal pockets, 4:5
bleeding on probing, 4:5

Toothbrushes
replacement recommendations, 5:28
Dentists' and Hygienists' preference, 5:28
comparison of .007 and .008 for effectiveness and safety, 5:22
scrubbing method, short stroke, 5:19
handle with alarm, 5:19

Viadent reports, evaluation, 3:18
Vinyl gloves
tactile discrimination, compared with latex, 2:21
durability after washing, 2:21

Water lines
infection control, 2:9
source of biofilm contamination, 2:13
Water Pik Automatic, compared with Interplak, 3:5

Xerostomia, effect on tissue and caries development, 4:10
Lashley cup test, 4:10

Zinc citrate dentifrice, Crest Tartar Control study, 1:13
soft tissue tolerance, 1:13
